Part history, part confession, part manifesto, Literature and Its Theorists is Tzvetan Todorov's bold statement of what literature is and what criticism should be, and is the final volume in Todorov's trilogy devoted to the theory and tradition of literary criticism, which also includes Theories of the Symbol, and Symbolism and Interpretation. This book represents the contemporary ideological debate in criticism as an opposition between classical dogmatism and modern relativism, or nihilism. Todorov seeks to break out of this paralyzing dichotomy and to achieve a morally committed criticism that offers the possibility of transcending extreme relativism without retreating into dogmatism, of opposing nihilism without ceasing to be an atheist. Todorov undertakes analytical portraits of major writers in four critical traditions: the Russian Formalists and Mikhail Bakhtin; the Germans Alfred Döblin and Bertolt Brecht; Jean-Paul Sartre,
Maurice Blanchot, Roland Barthes, and Paul Bénichou from France; and the Anglo-American critics Northrop Frye and Ian Watt. Asserting that the modern aesthetic is dominated by the Romantic ideology which divorces textual meaning from any reference to truth, Todorov considers how each author's work either remains within or challenges and moves beyond the Romantic framework. Finally, Todorov promotes the idea of criticism as a dialogue in which both author's and critic's voices are allowed to be heard as equals in the pursuit of truth. Through his personal, self-reflexive method which includes "conversations" with Watt and Bénichou, Todorov present Literature and Its Theorists as an example of "dialogic" criticism, and his own critical career as an object of such criticism. He thus offers Literature and Its Theorists as a bildungsroman, an account of his own attempts to think beyond Romanticism through a series of authors with whom he identifies in turn, a yet-to-be concluded novel of his apprenticeship in criticism. This English-language edition concludes with an appendix written in response to reactions to the French edition, two provocative essays that clarify Todorov's perception of traditional literary history, and his assessment of contemporary criticism.

The 14th century Javanese epic poem, Sutasoma, relates the life of a prince, born an incarnation of the Jina-Buddha Wairocana. It follows his spiritual journey to enlightenment and his temporal journey through marriage, kingship and eventual victory over the mighty, world-threatening demon, Porusada. Kate O'Brien's new translation delivers to the reader a highly approachable and lively rendition of this Buddhist epic, comparable in both complexity and scale to that of the Ramayana, yet significantly less known or understood.

This volume presents a variety of overall assessments of technology and individual descriptions of work-in-progress. Supported by private funders, non-profit organizations, government agencies, and a variety of other sources, these efforts address education programs focused on specific subject matter such as mathematics or troubleshooting of school-based learning using computers. They also focus on classes of technology such as intelligent systems, distance learning, and hypertext. Taken together, they portray the range of strategies through which we can begin to understand the impact of educational technology in the future. In addition, they illustrate different approaches currently adopted by technology designers to place and explain their work in a larger context. Each of the chapters presents a different point of entry on the technology assessment problem. Even those nominally focused on a single implementation, such as testing or teacher observation, demonstrate the clear interest by their authors in the larger implications of their work.

Multimedia-Based Instructional Design is a thoroughly revised and updated second edition of the best-selling book that provided a complete guide to designing and developing interactive multimedia training. While most training companies develop their training programs in many different technological delivery media—computer-based, web-based, and distance learning technologies—this unique book demonstrates that the
same instructional design process can be used for all media. Using just one process reduces cycle time for course development—and also reduces costs.

A guide to thirty-five creative assignments for pairs and groups Collaborative Learning Techniques is the bestseller that college and university faculty around the world have used to help them make the most of small group learning. A mountain of evidence shows that students who learn in small groups together exhibit higher academic achievement, motivation, and satisfaction than those who don't. Collaborative learning puts into practice the major conclusion from learning theory: that students must be actively engaged in building their own minds. In this book, the authors synthesize the relevant research and theory to support thirty-five collaborative learning activities for use in both traditional and online classrooms. This second edition reflects the changed world of higher education. New technologies have opened up endless possibilities for college teaching, but it's not always easy to use these technologies effectively. Updated to address the challenges of today's new teaching environments, including online, "flipped," and large lectures, Collaborative Learning Techniques is a wonderful reference for educators who want to make the most of any course environment. This revised and expanded edition includes: Additional techniques, with an all-new chapter on using games to provide exciting, current, technologically-sophisticated curricula A section on effective online implementation for each of the thirty-five techniques Significantly expanded pedagogical rationale and updates on the latest research showing how and why collaborative learning works Examples for implementing collaborative learning techniques in a variety of learning environments, including large lecture classes and "flipped" classes Expanded guidance on how to solve common problems associated with group work The authors guide instructors through all aspects of group work, providing a solid grounding in what to do, how to do it, and why it is important for student learning. The detailed procedures in Collaborative Learning Techniques will help teachers make sure group activities go smoothly, no matter the size or delivery method of their classes. Operating Systems: Internals and Design Principles is a comprehensive and unified introduction to operating systems. By using several innovative tools, Stallings makes it possible to understand critical core concepts that can be fundamentally challenging. The new edition includes the implementation of web based animations to aid visual learners. At key points in the book, students are directed to view an animation and then are provided with assignments to alter the animation input and analyze the results. The concepts are then enhanced and supported by end-of-chapter case studies of UNIX, Linux and Windows Vista. These provide students with a solid understanding of the key mechanisms of modern operating systems and the types of design tradeoffs and decisions involved in OS design. Because they are embedded into the text as end of chapter material, students are able to apply them right at the point of discussion. This approach is equally useful as a basic reference and as an up-to-date survey of the state of the art.

This intimate, moving, and timely collection of essays points the way to a world in which the burden of grief is shared, and pain is reconfigured into a powerful force for social change and collective healing." —Astra Taylor, author The People’s Platform "A primary message here is that from tears comes the resolve for the struggle ahead." —Ron Jacobs, author of Daydream Sunset "Rebellious Mourning uncovers the destruction of life that capitalist development leaves in its trail. But it is also witness to the power of grief as a catalyst to collective resistance." —Silvia Federici, author of Caliban and the Witch We can bear almost anything when it is worked through collectively. Grief is generally thought of as something personal and insular, but when we publicly share loss and pain, we lessen the power of the forces that debilitate us, while at the same time building the humane social practices that alleviate suffering and improve quality of life for everyone. Addressing tragedies from Fukushima to Palestine, incarceration to eviction, AIDS crises to border crossings, and racism to rape, the intimate yet tenacious writing in this volume shows that mourning can pry open spaces of contestation and reconstruction, empathy and solidarity. With contributions from Claudia Rankine, Sarah Schulman, David Wojnarowicz, Leanne Betasamosake Simpson, David Gilbert, and nineteen others. Cindy Milstein is the author of Anarchism and Its Aspirations, co-author of Paths toward Utopia: Graphic Explorations of Everyday Anarchism, and editor of the anthology Taking Sides: Revolutionary Solidarity and the Poverty of Liberalism.
